NeuroPark AI — Screening Assessment Report

Generated on 2026-07-30 11:18 AM | Document Ref: NPK-2607301118

OVERALL ASSESSMENT RISK STATUS

Classification: **Moderate Risk** (Multimodal composite analysis)

47% Probability Score

Patient Profile Summary

Age:	25	**Gender:**	Female
Family History:	No Family History	**Assessed Modalities:**	Partial Modality Assessment

Modality Breakdown Scores

Assessment Modality	Predicted Score	Risk Status
Subjective Symptoms	66 / 100	Elevated Risk
Vocal Acoustic Analysis	Not Provided / Failed	N/A
Handwriting Spiral Analysis	31 / 100	Normal

Clinical Scores & Symptom Severity (0-10)

Tremor Severity:	3/10	**MDS-UPDRS Score:**	0.0 / 199
Muscle Rigidity:	2/10	**MoCA Cognitive Score:**	0.0 / 30
Bradykinesia (Slowness):	3/10	**Functional Independence:**	0.0 / 10
Postural Instability:	2/10	**Sleep Disorders (REM):**	2/10

Screening Recommendations

• **Consult a Neurologist:** It is highly recommended to seek a professional clinical assessment with a movement disorder specialist/neurologist.

• **MDS-UPDRS Motor Evaluation:** Ask your physician about conducting a formal Unified Parkinson's Disease Rating Scale (MDS-UPDRS) exam to evaluate motor capabilities.

• **Periodic Screening Monitoring:** Repeat this self-administered assessment every 3 to 6 months to track progression rates of motor signals, voice metrics, and handwriting drawings.

• **Active Lifestyle and Exercise:** Engage in physical exercises targeting motor coordination, balance, and core strength, such as Brisky Walking, Tai Chi, Yoga, or specialized Parkinson's boxing programs.

CRITICAL DISCLAIMER: This prediction is for early screening purposes only. It does not constitute a medical diagnosis. Please consult a qualified neurologist for a professional clinical diagnosis and personalized care plan.
