NeuroPark AI — Screening Assessment Report

Generated on 2026-07-28 02:22 PM | Document Ref: NPK-2607281422

OVERALL ASSESSMENT RISK STATUS

Classification: **High Risk** (Multimodal composite analysis)

73% Probability Score

Patient Profile Summary

Age:	65	**Gender:**	Male
Family History:	Yes (Parkinson's Diagnosed in Relative)	**Assessed Modalities:**	Symptoms, Voice, Handwriting

Modality Breakdown Scores

Assessment Modality	Predicted Score	Risk Status
Subjective Symptoms	81 / 100	Elevated Risk
Vocal Acoustic Analysis	87 / 100	Elevated Risk
Handwriting Spiral Analysis	53 / 100	Elevated Risk

Clinical Scores & Symptom Severity (0-10)

Tremor Severity:	7/10	**MDS-UPDRS Score:**	45.0 / 199
Muscle Rigidity:	6/10	**MoCA Cognitive Score:**	23.0 / 30
Bradykinesia (Slowness):	7/10	**Functional Independence:**	4.0 / 10
Postural Instability:	6/10	**Sleep Disorders (REM):**	6/10

Screening Recommendations

• **Consult a Neurologist:** It is highly recommended to seek a professional clinical assessment with a movement disorder specialist/neurologist.

• **MDS-UPDRS Motor Evaluation:** Ask your physician about conducting a formal Unified Parkinson's Disease Rating Scale (MDS-UPDRS) exam to evaluate motor capabilities.

• **Periodic Screening Monitoring:** Repeat this self-administered assessment every 3 to 6 months to track progression rates of motor signals, voice metrics, and handwriting drawings.

• **Active Lifestyle and Exercise:** Engage in physical exercises targeting motor coordination, balance, and core strength, such as Brisky Walking, Tai Chi, Yoga, or specialized Parkinson's boxing programs.

CRITICAL DISCLAIMER: This prediction is for early screening purposes only. It does not constitute a medical diagnosis. Please consult a qualified neurologist for a professional clinical diagnosis and personalized care plan.
